

motorised BLINDS

Blind Designs have launched a brand new range of 200V motorised products. All motors used are the well known 'Somfy' range of products which are reliable, discreet & stylish enough to complement your interior décor scheme.

The future is here. At a click of a button you can raise or lower your blind to the selected position to allow for optimum filtering of light & privacy.

Control your blinds individually or at the flick of a button or control all your blinds simultaneously. Radio frequency technology means that no line of sight is necessary to control your blinds so you do not even have to be in the same room.

Place your blinds on a timer & raise & lower groups of blinds at certain times or even place them on a security mode to raise & lower your blinds randomly in your absence.

Motors are currently available in Wood Venetian, Retro Venetian, Bamboo, Roman Panel & Roller Blinds.

REFLECT YOUR STYLE
